IN THE DRAWINGS

Applicant respectfully requests approval of the following drawing changes. Figure 6 has been amended to change reference numeral "104" to "103". Applicant submits, in anticipation of approval of the drawings changes, a replacement sheet formal Figure 6. Also submitted herewith is an annotated Figure 6 on which the requested changes are reflected in red ink. No new matter has been added.

GE Vent-Dry Transformer Matrix Pricing Worksheet

Please complete the pricing matrix below and email this spreadsheet to: *Gregory.Wyatt@indsys.ge.com*
If accurate generalizations can be made, such as "add X% for 80°C rise", "subtract X% for Al", etc. this is acceptable. However, keep in mind that the relative pricing levels should have a high degree of accuracy (i.e. every price should be as competitive as the next). This matrix will be used to develop a pricing equation specifically for your company. These pricing equations, from each supplier, will be the basis for the final equation which will be offered in GE's SourceBid event. The more accurate the initial matrix is, the more easily it will fit the final equation. Therefore, it is in your company's best interest to utilize a pricing scheme that will be precise for each individual transformer.

The pricing matrix is intended to cover the following voltage and BIL levels:

	Primary (HV) voltages				Secondary (LV) voltages	
	30kV	45kV	60kV	95kV	10kV	30kV
Voltage Rating	2400	2400	2400	12000	208	208
	4160	4160	4160	12470	240	240
	4800	4800	4800	13200	480	480
		6900	6900	13800		2400
		7200	7200			4160
		8320	8320			
			12000			
			12470			
			13200			
			13800

FIG. 4

Assumptions: *(if any of these assumptions are incorrect for your company, please make note of this.)*
Changing *only* the voltage level, while remaining in the same BIL class, does not affect price.
Secondary voltages (LV) of 208v may not be available in higher kVA ratings (indicate by leaving these fields blank).
No cost difference exists between Delta and Wye connections.
